

Telfast®

(Fexofenadine HCl / antihistamine)

SANOFI 

❖ Allergic Rhinitis Management With SMART TELFAST

Patients who are taking antihistamines with sedating properties have a 1.5 times increased risk of occupational injury. Drowsiness is a weak predictor of impairment.¹

NON-SEDATING

Sedation refers to both symptoms of drowsiness, subjective state of sleepiness or lethargy, and overt measures of impairment.¹

NON-IMPAIRING

Impairment is an objectively measurable decrease or absence of a specific physical or mental ability, as to drive or operate cars or other motorized equipment and complex tasks.¹
